DESCRIPTION: 16s rRNA gene from Haemophilus
DESCRIPTION: influenzae (Accession # M35019, M59433 )
DESCRIPTION: nucleotides 406 to 417
HYPOTHETICAL: no
ANTI-SENSE: no
GENERAL INFORMATION:
APPLICANT: WANG, C. -G.

SQUENCE 39, Application US/09393783A

Patent No. 6355428

GENERAL INFORMATION:

APPLICANT: Schroth, Gary P.

APPLICANT: Sthroth, Gary P.

APPLICANT: Suh, Young J.

TITLE OF INVENTION: Nucleic Acid Ligand Interaction Assays
FILE REFERENCE: 460-0128.30

CURRENT APPLICATION NUMBER: US/09/393, 783A

CURRENT FILING DATE: 1999-10-09

PRIOR FILING DATE: 1998-09-11

NUMBER OF SEQ ID NOS: 80

SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH: 12
                                                                   TYPE: DNA

) ORGANISM: Artificial Sequence

) FEATURE:

) OTHER INFORMATION: Description of Artificial Sequence: linker

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-08-859-554-262/C

US-08-859-554-262/C

Sequence 262, Application US/08859554

Fatent No. 6083659:

APPLICANT: Hardin, Susan H.

APPLICANT: Hardin, Paul E.

TITLE OF INVENTION: Design and Optimized Primer Library for TITLE OF INVENTION: Gene Sequencing and Method Thereof

NUMBER OF SEQUENCES: 56

CORRESPONDENCE ADDRESS:

ADDRESSEE: Fulbright & Jaworski L.L.P.

STREET: 1301 McKinney, Suite 5100

CITY: Houston

STATE: Texas

COMPUTER READABLE FORM:

MEDIUM TYPE: Ploppy disk

COMPUTER: IBM PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

FILING DATE:

APPLICATION NUMBER: US/08/859,954
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PEATURE:
OTHER INFORMATION: Description of Artificial Sequence: Synthetic
OTHER INFORMATION: oligonucleotide, consensus sequence from human

Patent No. 6109776

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: Method and System for Computationally Identifying
TITLE OF INVENTION: Clusters Within a Set of Sequences

TITLE OF INVENTION: Clusters Within a Set of Sequences

TITLE OF INVENTION: US/09/063,450

CURRENT FILING DATE: 1998-04-21

NUMBER OF SEQ ID NOS: 38

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 9

Sequence 49, Application US/08686116A

Patent No. 514331

TITLE OF INVENTION: Peptide Nucleic Acids Having Enhanced
TITLE OF INVENTION: Pinding Affinity, Sequence Specificity

Patent No. 514331

TITLE OP INVENTION: ans Solubility

NUMBER OF SEQUENCES: 53

CORRESPONDENCE ADDRESS:

ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5714331ris LLP

STREET: One Liberty Place - 46th Floor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 386
US-08-686-116A-51/c
Sequence 1. Application US/08686116A
Patent No. 5714331
GENERAL INFORMATION:
APPLICATION PEDIAGE at 1.
TILLE OF INVENTION: Peptide Nucleic Acids Having Enhanced
TITLE OF INVENTION: Binding Affinity, Sequence Specificity
                       Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 8; DB 1; Length 10;

Sequence 51, Application US/08685484
Patent No. 5719260.

Patent No. 5719260.

Patent No. 5719260.

APPLICANT: Buchardt et al.
TITLE OF INVENTION: Peptide Nucleic Acids Having Amino Acid
TITLE OF INVENTION: Side Chains
NUMBER OF SEQUENCES: 53
CORRESPENDENCE ADDRESS:
ADDRESSEE: WOOGCOCK Washburn Kurtz Mackiewicz & No. 5719262ris LLP
STREET: One Liberty Place - 46th Floor
CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .

| Sequence 51, Application US/08847108
| Patent No. 5736336
| GENERAL INFORMATION:
| APPLICANT: Buchardt et al.
| TITLE OF INVENTION: Binding Affinity, Sequence Specificity
| TITLE OF INVENTION: and Solubility
| Patent No. 5736336
| TITLE OF INVENTION: and Solubility
| WUMBER OF SEQUENCES: 53
| CORRESPONDENCE ADDRESS:
| ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 5736336ris LLP

Sequence 56. Application US/08686114B

Patent No. 6414112

GENERAL INFORMATION:
PERIODICANT: Buchardt et al.
TITLE OF INVENTION:
PORTICIONIN: Peptide Nucleic Acids Having 2,6-Diaminopurine Nucleob
NUMBER OF SEQUENCES: 60

CORRESPONDENCE ADDRESS:
CORRESPONDENCE ADDRESS:

                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                           US-09-508-753B-440/c

US-09-508-753B-440/c

Sequence 440, Application US/09508753B.

Patent No. 6544736

GENERAL INFORMATION:
APPLICANT: ARIAE SHIMAMOTO
APPLICANT: Yako SHIBATA
APPLICANT: Yako SHIBATA
APPLICANT: Hiroko FUNAKI
APPLICANT: Hiroko FUNAKI
APPLICANT: Hiroko FUNAKI
APPLICANT: Masanori WaTAHIKI
APPLICANT: Masanori WaTAHIKI
APPLICANTON: Method for Synthesizing CDNA from mRNA sample
TITLE OF INVENTION: Method for Synthesizing CDNA from mRNA sample
CURRENT APPLICATION NUMBER: US/09/508,753B

CURRENT FILING DATE: 2000-06-16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0
                                                                                                                                                                                                                                                                         ;

DESCRIPTION: third strand derived from esterase D
DESCRIPTION: sequence region in Seq ID No. 586124473
HYPOTHEFICAL: Yes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ; PUBLICATION INFORMATION:

MOLECULE TYPE: Genomic DNA
DESCRIPTION: esterase D gene (Accession # M13450)
DESCRIPTION: mucleotides 777 to 787
HYPOTHETICAL: No
ANTI-SENSE: No
ORIGINAL SOURCE:
ORGANISM: Homo sapiens
POSITION IN GENOME:
CHROMOSOME/SEGNENT: chromosome 13
MAP POSITION: 13141.1-q14.2
PUBLICATION: 13141.1-q14.2
AUTHORS: Lee, E Y H P, Lee, W H.

RESULT 453
US-07-754-918A-4/C
US-07-754-918A-4/C
Sequence 4, Application US/07754918A
Factor No. 5286484
GENERAL INFORMATION
TITLE OF INVENTION: NUCLEOTIDE SEQUENCE CODING FOR AN
TITLE OF INVENTION: OUTER MEMBRANE PROTEIN FROM NEISSERIA MENINGITIDIS AND USE
TITLE OF INVENTION: OF SAID PROTEIN IN VACCINE PREPARATIONS
NUMBER OF SEQUENCES: 14 ô
